### INTERNATIONAL PLANT NUTRITION COUNCIL MEMBERS (as of September 2017)

Martin Broadley	Søren Husted	Ciro A. Rosolem
Patrick Brown	Leon V. Kochian	Jan K. Schjoerring
Ismail Cakmak	Peter Kopitke	Marta Vasconcelos
Christogonus K. Daudu	Hans Lambers	Nicolaus von Wirén
Klaus Dittert	Kristian Holst Laursen	Brian M. Waters
Toru Fujiwara	Sylvester Oikeh	Philip J. White
Ellis Hoffland	Dirceu Mattos Jr.	Fusuo Zhang
	Zed Rengel	Fang-Jie Zhao

## SPONSORS

Knowledge grows

Dear Colleagues,

The 18<sup>th</sup> International Plant Nutrition Colloquium (IPNC) took place 21-24 August 2017 at the Tivoli Congress Center in Copenhagen, Denmark. As a lead-up to IPNC 2017, satellite meetings on boron and manganese were organized 19-20 August at the Copenhagen Plant Science Centre.

The IPNC is held every fourth year and has since its start back in 1954 grown to become the most important international meeting on fundamental and applied plant nutrition. The IPNC is organised by the International Plant Nutrition Council, which seeks to advance science-based non-commercial research and education in plant nutrition in order to highlight the importance of this scientific field for crop production, food security, human health and sustainable environmental protection.

The main theme of IPNC 2017 was *Plant Nutrition for Global Green Growth*. This theme was chosen to highlight that plant nutrients are fundamental drivers for the successful intensification of the global crop production, which is required in order to meet the demands of the future bio-based society for nutritious food, feed and raw materials. The themes of IPNC 2017 covered a broad range of topics in plant nutrition and nutrient management. As a new initiative, a session on new analytical techniques in plant nutrition was organised. The *Marschner Young Scientist Award* for outstanding PhD students and early-career researchers with a potential to become future research leaders was during IPNC 2017 handed out to four young scientists allowing them to present their outstanding work in a general session of the colloquium.

Close to 600 participants from more than 50 different countries attended IPNC 2017, while the two satellite meetings hosted about 150 participants. The meetings provided an excellent frame for exchange and transfer of information on new developments in the field of plant nutrition. The essence of the presented information is disseminated in this e-book, which we hope will be a valuable source of information for all with an interest in the field of plant nutrition.

The next IPNC will take place in Brazil in 2021. Look forward to meet you there.

Jan K. Schjoerring

Chairman of IPNC 2017

Boron satellite meeting.....	856
Manganese satellite meeting.....	912

## SCIENTIFIC PROGRAMMES

XVIII International Plant Nutrition Colloquium 2017	
Location: Tivoli Congress Center, Copenhagen, Denmark	
17:00-21:00	20 August, Sunday <b>Registration and poster mounting</b> <b>Welcome reception from 19:30 – Tivoli Foyer</b>
21 August, Monday	
	<b>Opening session – Tivoli Congress Hall</b> Chair: <b>Ismail Cakmak, Turkey</b> Past President of the International Plant Nutrition Council  <b>9:00-9:10 Welcome by Jan K. Schjoerring, Denmark</b> Chairman of the Colloquium and President of International Plant Nutrition Council  <b>9:10-9:20 Welcome by Thomas Bjørnholm, Denmark</b> Pro-rector for Research, University of Copenhagen  <b>9:20-9:40 H.C. Andersen parade</b>  <b>9:40-10:20 Opening plenary presentation</b> Plant nutrition for global green growth - Designing next generation fertilizers for crop nutrition <b>Mike McLaughlin, Australia</b>
10:20-10:50	Coffee break and poster viewing (Theme 1-2)
	<b>Plenary keynote presentations – Tivoli Congress Hall</b> Chair: <b>Walter Horst, Germany</b>  <b>10:50-11:15</b> Exploiting the root-soil microbiome for benefit to plant nutrition <b>Alan E. Richardson, Australia</b>  <b>11:15-11:40</b> Phosphorus promotes nitrogen fixation in soybean <b>Hong Liao, China</b>  <b>11:40-12:05</b> Non-mycorrhizal strategies to acquire phosphorus from soils with very low phosphorus availability <b>Hans Lambers, Australia</b>  <b>12:05-12:30</b> Plant nutrients - The functional ionome <b>Philip White, UK</b>
12:30-14:00	Lunch, poster viewing and speakers corner (Theme 1-2)

21 August, Monday		
	Parallel sessions	
14:00-15:45	<b>Theme 1: Plant-microorganism interactions and nutrient acquisition – Tivoli Congress Hall</b> Chair: <b>Iver Jakobsen, Denmark</b>	<b>Theme 2: Nutrient functions in plants – Carstensen Auditorium</b> Chair: <b>Toru Fujiwara, Japan</b>
14:00-14:15	Bio-effectors for alternative plant nutrition strategies: practical aspects for successful applications in crop production <b>Günther Neumann, Germany</b>	Potassium supply mitigates photo-oxidative damage under osmotic stress by avoiding ROS generation and improving metabolism <b>Ershad Tavakol, Germany</b>
14:15-14:30	A quantitative analysis of phosphorus acquisition efficiency of direct pathway and mycorrhizal pathway of maize <b>Gu Feng, China</b>	Photoprotective responses and PSII functionality under magnesium deficiency <b>Merle Tränkner, Germany</b>
14:30-14:45	The root external mycelium of mycorrhizal fungi has a key role in plant nutrition but is suppressed by the soil microbiota <b>Carla Cruz Paredes, Denmark</b>	Functional impacts of phosphorus deficiency on the photosynthetic machinery <b>Andreas Carstensen, Denmark</b>
14:45-15:00	Identifying the mechanisms behind mycorrhiza-enhanced plant zinc nutrition <b>Stephanie Watts-Williams, Australia</b>	Frost increases internal potassium requirements for alleviation of sterility and grain yield of wheat <b>Richard Bell, Australia</b>
15:00-15:15	Small signalling peptides – New regulators of symbiotic interactions <b>Thomas de Bang, Denmark</b>	Limiting physiological processes for maize growth under magnesium deficiency <b>Stephan Jung, Germany</b>
15:15-15:30	Complementarity between citrate and phytase exudation enhances acquisition of soil phosphorus by plants <b>Timothy George, UK</b>	Potassium–silicon interaction under drought stress condition in barley <b>Seyed Abdollah Hosseini, France</b>
15:30-15:45	Do bioeffectors matter? - A meta-analysis of more than 150 experiments <b>Jonas Duus Stevens Lekfeldt, Denmark</b>	Sulfur deficiency negatively affects nitrate root-to-shoot translocation and leaf cytokinin concentration in wheat <b>Jose Maria García-Mina, Spain</b>
15:45-16:45	Coffee break, poster viewing and speakers corner (Theme 1-2)	

21 August, Monday	
16:45-18:00	<p><b>Marschner session: Nurturing the future – Tivoli Congress Hall</b>                      Chair: <b>Jan K. Schjoerring, Denmark</b></p> <p><b>16:45-17:00 Award ceremony</b></p> <p><b>17:00-17:15</b> Role of soil micronutrients and fertilizer management in crop nutrition under variable smallholder cropping  <b>Muneta Grace Manzeke, Zimbabwe</b></p> <p><b>17:15-17:30</b> Identification of transporters involved in metal stress tolerance in plants  <b>Kengo Yokosho, Japan</b></p> <p><b>17:30-17:45</b> Proteaceae from severely phosphorus-impooverished habitats preferentially allocate phosphorus to photosynthetic cells  <b>Patrick E. Hayes, Australia</b></p> <p><b>17:45-18:00</b> Multi-dimensional stable isotope analysis – A novel analytical tool in plant nutrition  <b>Kristian Holst Laursen, Denmark</b></p>
18:00-18:10	<p><b>18:00-18:10 SOPIB Award ceremony</b>                      Chair: <b>Michel Marchand, France</b>                      SOPIB Awardee: <b>Dilek Anaç, Turkey</b></p>
Evening	Poster viewing and welcome reception – City Hall

22 August, Tuesday	
8:30-10:10	<p><b>Plenary keynote presentations – Tivoli Congress Hall</b>                      Chair: <b>Patrick Brown, USA</b></p> <p><b>8:30-8:55</b> A paradigm of nutrient management for fertilizer industry and global society  <b>Fusuo Zhang, China</b></p> <p><b>8:55-9:20</b> Factors affecting the permeability and efficacy of foliar fertilisers: An update  <b>Victoria Fernandez, Spain</b></p> <p><b>9:20-9:45</b> Molecular mechanisms for distribution of mineral elements in plants  <b>Jian Feng Ma, Japan</b></p> <p><b>9:45-10:10</b> Silicon mediates ion uptake, transport and homeostasis in plants under mineral stress  <b>Miroslav Nikolic, Serbia</b></p>
10:10-10:45	Coffee break and poster viewing (Theme 3-4)

22 August, Tuesday		
	Parallel sessions	
10:45-12:30	<b>Theme 3: Nutrient management and fertilizers in crop production – Tivoli Congress Hall</b>  Chair: <b>Karl H. Muehling, Germany</b>	<b>Theme 4: Nutrient uptake, transport and homeostasis – Carstensen Auditorium</b>  Chair: <b>Nicolaus von Wirén, Germany</b>
10:45-11:00	From research to farmers: An example of knowledge transfer on potassium benefit in Turkey <b>Dilek Anaç, Turkey</b>	Iron-nicotianamine transporters regulate long distance shoot to root signalling of iron deficiency in Arabidopsis <b>Elsbeth Walker, USA</b>
11:00-11:15	Efficiency of foliar applications of potassium sulphate on field crop production <b>Michel Marchand, France</b>	The iron-chelate transporter OsYSL9 is crucial in iron distribution in developing rice grain <b>Naoko Nishizawa, Japan</b>
11:15-11:30	Establishing high-yielding maize system for sustainable intensification in China <b>Xinping Chen, China</b>	Associative transcriptomics reveals potential new targets for calcium and magnesium uptake in <i>Brassica napus</i> <b>Thomas Alcock, UK</b>
11:30-11:45	Proximal and remote quantification of nitrogen fertilizer demand – A case study in sugar beet <b>Frank Liebisch, Switzerland</b>	Increasing rice nitrogen use efficiency by altering nitrate transporter activity <b>Guohua Xu, China</b>
11:45-12:00	Effects of split nitrogen application on grain protein concentration and composition in winter wheat at different nitrogen fertilisation rates <b>Anne Rossmann, Germany</b>	The kinase CIPK23 inhibits ammonium transport in <i>Arabidopsis thaliana</i> <b>Benjamin Neuhäuser, Germany</b>
12:00-12:15	Nutrient management increases crop water use efficiency <b>Dejene Eticha, Germany</b>	The strigolactone transporter PDR1 as a tool to enhance plant yield on nutrient poor soil <b>Lorenzo Borghi, Switzerland</b>
12:15-12:30	Comparing ammonium sulfate to recent sulfur fertilizers in sulfur availability to crop growth <b>S.H. (Norman) Chien, USA</b>	Cis- and epi-regulation of amino acid transporters contribute to inhibition of ear growth by nitrogen limitation in maize <b>Xuexian Li, China</b>
12:30-14:00	Lunch, poster viewing and speakers corner (Theme 3-4)	

22 August, Tuesday	
14:00-15:40	<p><b>Plenary keynote presentations – Tivoli Congress Hall</b>                      Chair: <b>Leon Kochian, Canada</b></p> <p><b>14:00-14:25</b> The root endodermis acts as a gateway for vascular transport  <b>David E. Salt, UK</b></p> <p><b>14:25-14:50</b> AMT-type transporters mediate radial transport pathways and root-to-shoot translocation of ammonium  <b>Nicolaus von Wirén, Germany</b></p> <p><b>14:50-15:15</b> Making waves ... Einstein's lessons for crop nutrition research  <b>Paul E. Fixen, USA</b></p> <p><b>15:15-15:40</b> Plant nutritional challenges in an industrialized agriculture – The Danish lesson  <b>Leif Knudsen, Denmark</b></p>
15:40-16:30	Coffee break, poster viewing and speakers corner (Theme 3-4)

22 August, Tuesday			
Parallel sessions			
16:30-18:30	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; vertical-align: top;"> <p><b>Theme 3: Nutrient management and fertilizers in crop production – Tivoli Congress Hall</b>                      Chair: <b>Fusuo Zhang, China</b></p> </td> <td style="width: 50%; vertical-align: top;"> <p><b>Theme 4: Nutrient uptake, transport and homeostasis – Carstensen Auditorium</b>                      Chair: <b>Patrick Bienert, Germany</b></p> </td> </tr> </table>	<p><b>Theme 3: Nutrient management and fertilizers in crop production – Tivoli Congress Hall</b>                      Chair: <b>Fusuo Zhang, China</b></p>	<p><b>Theme 4: Nutrient uptake, transport and homeostasis – Carstensen Auditorium</b>                      Chair: <b>Patrick Bienert, Germany</b></p>

### INTRODUCTION

Silicon is the only known mineral element that effectively alleviates multiple environmental stress in many plant species. Over the past decade rapid progress has been made in understanding the mechanisms through which Si mediates mineral excess and/or toxicity stress. It has been demonstrated that Si mediates uptake and transport of mineral elements at excess by regulating expression of various transporter genes (e.g. Kim et al., 2014; Akcay and Erkan, 2016; Che et al., 2016); however, the role of Si in nutrient uptake and transport under nutrient deficiency conditions is still insufficiently understood. In this presentation, I will talk about Si influence on (a) root P-starvation responses for rhizosphere mobilization and uptake of Pi in wheat (*Triticum aestivum*) and (b) acquisition and long-distance transport of Fe in cucumber (*Cucumis sativus*) under low Fe conditions; our recent unpublished work on (c) Si-regulated expression of the transporters involved in Na homeostasis in maize (*Zea mays*) subjected to NaCl stress will also be discussed.

### RESULTS AND DISCUSSION

#### (a) Silicon-mediated P acquisition in wheat

In addition to amelioration of the main soil constraints ( $H^+$  and  $Al^{3+}$  rhizotoxicity) for root growth in acid soil by increasing soil pH, Si fertilization significantly increased root exudation rate of citrate and malate for mobilization of Pi in the rhizosphere (Kostic et al., 2017) through up-regulated related anion efflux transporter genes *TaMATE1* and *TaALMT1* in wheat roots. Furthermore, Si also increased exudation rate of the organic anions by roots grown under Al-free and low P conditions. Silicon-increased shoot P concentration to an adequate level (in the range of P-fertilized plants) can also be attributed to the higher expression levels of *TaPHT1;1* and *TaPHT1;2* transporter genes for Pi uptake compared to both lime-treated (increased soil pH) and P-fertilized wheat plants (Kostic et al., 2017).

#### (b) Silicon-mediated Fe acquisition and long-distance transport of Fe in cucumber

At the root level, Si increased Fe pools in the root apoplast of cucumber, in parallel with increased accumulation of Fe-mobilizing compounds (organic acids and phenolics) in the root tissue by up-regulating expression of key genes related to their biosynthesis (Pavlovic et al., 2013; Bityutskii et al., 2014). In Fe-deficient cucumber plants, Si up-regulated expression of the Fe-deficiency responsive genes involved in the Strategy 1-based Fe uptake, *CsHA1*, *CsFRO2* (also known as *CsFRO1*) and *IRT1* (Pavlovic et al., 2013). Furthermore, Si facilitated root-to-shoot movement of Fe complexed by citrate via xylem, by increased concentration of the Fe-chelators, and more directly through the formation of Si-Fe complex in the xylem sap (Pavlovic et al., 2013; Stevic et al., 2016).

At the shoot level, we showed for the first time that Si induces Fe mobilization in older (sink) leaves and increases its retranslocation to younger (source) leaves (Pavlovic et al., 2016). Silicon increased the accumulation of Fe chelator nicotianamine (NA) by up-regulating expression of *CsNAS1* gene responsible for its biosynthesis, which in turn enhances chelation of Fe for NA-mediated Fe transport via phloem. Also, Si up-regulated expression of *CsYSL1* transporter genes responsible for loading of Fe-NA in the source leaves and phloem unloading of Fe in the sink leaves.

(c) Silicon-mediated Na homeostasis in maize

Here we show for the first time that Si significantly decreased Na accumulation in the root apex and cortex of maize plants exposed to mild NaCl stress (40 mM) through up-regulation of the expression of efflux Na<sup>+</sup> transporter gene *ZmSOS1* and down-regulation of the expression of influx transporter gene *ZmHKT1;1*. However, Si also markedly increased the Na concentrations in the xylem sap (and concomitantly in the leaf tissues) by up-regulating *ZmSOS1* involved in xylem loading of Na<sup>+</sup>. Albeit higher Na accumulation was recorded within the leaf tissue, we clearly demonstrated higher vacuolar to chloroplast sequestration ratio in Si-fed plants which was further supported by higher expression of tonoplast transporter gene *ZmNHX5* for vacuolar Na<sup>+</sup> transport. We also show for the first time that Si significantly increased shoot-to-root Na recirculation via phloem; Si-mediated phloem transport was further confirmed by up-regulated expression of leaf *ZmHKT1;1* responsible for Na<sup>+</sup> loading into the phloem.

## CONCLUSIONS

The role of Si in modulation of nutrient and other mineral element utilization appears to be more indirect by transcriptional regulation of genes responsible for both root acquisition and tissue homeostasis. Further understanding of how exactly Si regulates the expression of transporter genes will help to improve crop productivity, yield quality and food safety.

## ACKNOWLEDGEMENTS

This presentation is dedicated to the memory of Professor Volker Römheld, who initiated our work on silicon in plants. Unpublished research was supported by the National Grants of the Ministry of Education, Science and Technological Development of Serbia (173028 to M. N. and 173005).
