WELCOME MESSAGE

On behalf of the organizers and organizing committee of the 6th Conference of the Serbian Society for Ceramic Materials (6CSCS-2022), I would like to extend my warmest welcome to all of you for attending the 6CSCS-2022. The conference is hosted and organized by the Serbian Society for Ceramic Materials, and co-organized by Institute for Multidisciplinary Research - University of Belgrade, Institute of Physics - University of Belgrade, Center of excellence for the synthesis, processing and characterization of materials for use in extreme conditions “CEXTREME LAB”, Institute of Nuclear Sciences “Vinča” - University of Belgrade, Faculty of Mechanical Engineering - University of Belgrade, Center of excellence for green technologies, Institute for Multidisciplinary Research - University of Belgrade, and Faculty of Technology and Metallurgy - University of Belgrade.

The goal of the Conference is to provide a platform for academic exchange among participants from universities, institutes, companies around the region in the field of ceramics research as well as to explore new direction for future development. 6CSCS-2022 aims to bring together leading academic scientists, researchers and research scholars to exchange and share their experiences and research results about all aspects of ceramic materials. It also provides the premier inter-multi-trans-disciplinary forum for researchers, practitioners and educators to present and discuss the most recent innovations, trends, and concerns, practical challenges encountered and the solutions adopted in the field of ceramic materials. We have received 75 abstracts with researchers from 17 countries.

The Conference will feature two plenary lectures, 16 invited talks and 57 oral and poster presentations as well as exhibitions of some new ceramic materials and devices. 6CSCS-2022 includes Ceramic powders, characterization and processing, High temperature phenomena, sintering, microstructure design and mechanical properties, Electro and magnetic ceramics, Ceramic composites, membranes and multimaterials, Traditional ceramics and Computing in materials science. Exhibitions from company sponsors will be held at the Conference as well.

Bismuth ferrite (BiFeO₃) powders were synthesized by auto-combustion method. To decrease the quantity of active phase and improve the specific surface area, composites of BiFeO₃ and natural porous materials (diatomaceous earth and cuttlebone) were prepared by chemical method from solution and calcined at low temperature. Such obtained powders were used as adsorbents and photocatalysts in methylene blue water solutions. Nature of photocatalysis under visible and UV-Vis light was examined under different pH conditions and presence of hydrogen peroxide, dissolved iron(III), oxalates and some other ions. Methylene blue is capable to absorb sunlight and insert electrons into semiconductor, so possibility of this way achieved dye-sensitization was studied [1]. Composites expressed better properties than individual components confirming the synergetic effect [2]. Acidic conditions were more suitable for decolorization, so possible Fenton reaction based homogeneous catalysis was also considered.
